

# Roses 2024

**Pictured:** *BLUE SEPTEMBER*

## Recycle & Score Return your Terra Viva rose pot and receive a \$1 next-purchase credit!

We're mindful of the impact that the horticulture industry has on the earth beneath our gumboots and we're serious about reducing that impact through local initiatives. Which is why we're offering a **\$1 credit on your next purchase** for every Terra Viva rose pot returned to us. The benefits are many: we save costs in pot production and you benefit from those savings; industry is responsible for less energy consumption and waste output; less plastic enters our landfills and we all get warm fuzzies at night, curled up in our blankies, knowing that, little by little, we're doing our bit to protect and save the planet that sustains us.

## Discounts for Pre-Season Orders

To receive a **10% discount** order a rose before 31 May & collect before 31 July (excluding Flower Carpet Roses).

## Want something else?

We can try to source certain varieties that aren't on our list, but please note that the growers have imposed a \$3 surcharge for one-offs.

## Abbreviations

**L** = Low (60-90cm), **M** = Medium (90-120cm), **T** = Tall (120-150cm), **VT** = Very Tall (+150cm)  
**DA** = David Austin, **FL** = Floribunda, **HT** = Hybrid Tea, **HR** = Hybrid Rugosa, **OF** = Old Fashioned  
**UNDERLINED** = NEW & RECENT RELEASES FOR 2024

Home & Garden

THE EASY ABC OF

# Rose Care

## WHAT TO DO & WHEN TO DO IT

### Spring

- Planting new roses
- Feeding in September
- Starting a regular spraying programme
- Starting regular watering when necessary

### Summer

- Planting new roses
- Feeding in November
- Regular summer spraying programme
- Regular watering
- Summer pruning

### Autumn

- Feeding in February
- Regular summer spraying
- Regular watering
- Summer pruning until the end of March, then leave plants to go into dormant phase

### Winter

- Choosing & planting new roses
- Winter pruning
- Cleaning up leaf debris under roses
- Spraying after pruning

### Planting

Prepare the site by digging in compost (2/3 soil to 1/3 compost). The hole should be 1/3 bigger than the root area of the new plant. Plant with a good margin between the graft and the top of the soil to allow for applying compost in the future. Tramp the soil down firmly after planting & water in. Fertiliser should only be applied to the surface of the soil after planting to avoid burning the roots.

### Winter Pruning

Take out all thin, weak, or dead stems right out. The remaining thicker strong healthy stems should be cut back by approx 1/3. Use sharp clean secateurs, and cut the stem approx 15mm above an outward-facing group of 5 leaves or the leaf nodule (a 'bump' on the stem). The angle of the cut should be approx 45 degrees.

### Summer Pruning

Cut back stems as they finish flowering, taking them down to the first outward-facing group of 5 leaves & cut the stem approx 15mm above the joint on an angle of approx 45 degrees. Removing only the spent flower heads will encourage weaker new growth.

### Watering

It's almost impossible to overwater roses and a hose trickling steadily at the base of the plant once every 10 days provides a thorough deep watering, avoiding water on the foliage which can encourage disease. Good watering encourages healthy strong new growth.

### Feeding

Rose foods with high potash levels, like *iCan Rose Food*, will maximise flowering and as roses love sheep manure, combine these two most important elements. Sheep manure also encourages earthworms and improves soil texture.

### Pest & Fungus Control

Winter - spray after pruning with *Free Flow Copper* (fungus & disease control) and *Enspray 99 Oil* (insect control). Spring & summer - follow two regimes to avoid any build-up of resistance: *Yates Mavrik Insect & Mite Spray* + *Yates Fungus Fighter*. *Combat 3-in-1 for Roses* (combo insecticide, fungicide, & fertiliser).
